

Together for more informed decisions

Philips IntelliVue MX800 bedside patient monitor

PHILIPS
sense and simplicity

One intuitive view:

Information system? Patient monitor? Actually, it's both. The world's best-selling patient monitors are evolving with you to take you where you need to go. Fitting seamlessly into the IntelliVue family of solutions, the Philips IntelliVue MX800 is designed to simplify access to the patient information you need to enhance diagnostic confidence throughout the hospital.

See it all

The IntelliVue MX800 features an integrated PC for one intuitive view with clear patient status and relevant clinical information at bedside. Send and receive patient information across modalities for more informed decisions at the point of care.

Separate but together

The monitor and PC are concurrent and independent. Quickly and easily access information from the hospital intranet or applications at bedside with no compromise to patient vital signs monitoring or clinical alerts.

Easy to use

Fully compatible with the IntelliVue family of patient monitors, and with the same intuitive user interface, the MX800 can blend seamlessly into your existing IT infrastructure, helping you to make the most of time, talent, and resources.

Reduces the risk of infection

The IntelliVue MX800 is designed with smooth surfaces and a minimum number of seams, and is easy to clean to reduce the risk of cross-contamination.

More actionable information at the point of care

No other patient monitor can offer you better-integrated access to relevant patient information at the bedside, and no other patient monitor offers a broader range of embedded Clinical Decision Support tools for your team. The MX800 easily integrates into a hospital's existing IT infrastructure and is highly configurable and widely scalable.

- Exceptional integration of monitoring and patient information capitalizes on next-generation "IT-centric" bedside applications
- Allows quick and easy access to relevant patient information for more informed decisions at the point of care
- Familiar intuitive touchscreen user interface with wide screen and flexible screen options are designed to smooth workflow

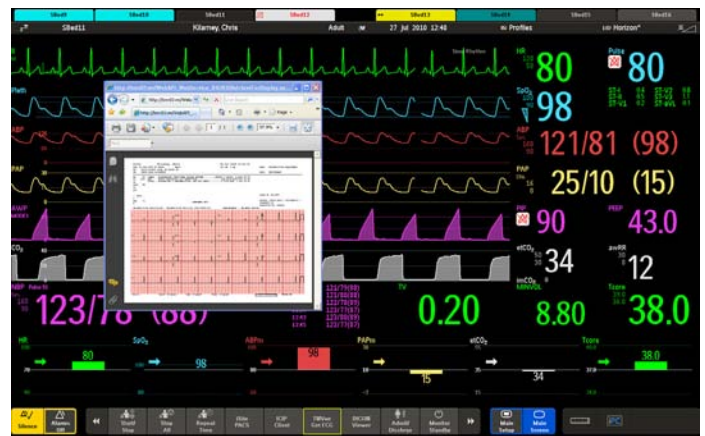

Features a 19" widescreen view with intuitive touchscreen operation.

yours

The information you need at the point of care

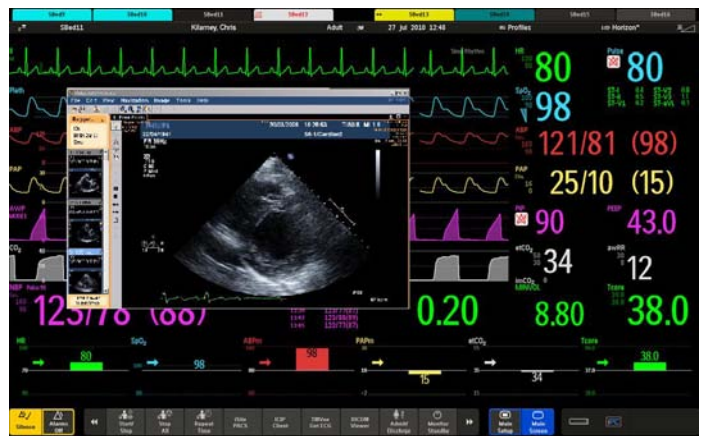

Enjoy the assurance of world-class Philips measurements.

Compare against previous 12-lead ECGs.

Call up the latest X-ray.

Call up your patient's latest ultrasound image.

Faster decisions at

Philips IntelliVue MX800 gives you full access to relevant patient information using the patient monitor, with a suite of clinical decision and workflow support applications at the point of care.

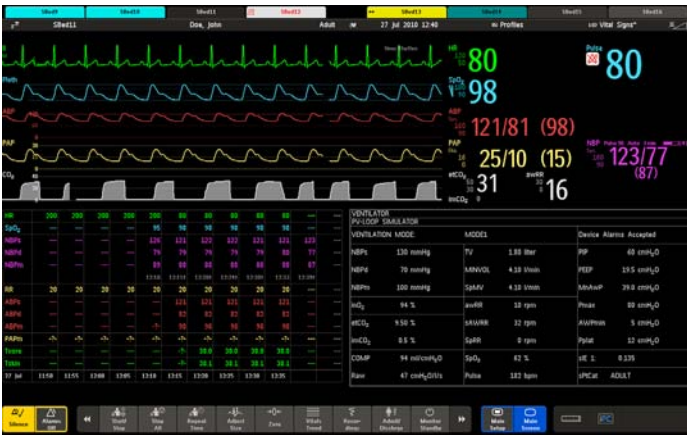

Predictive and preventative

The majority of patients around the world are monitored with a Philips patient monitor. It's no wonder. The IntelliVue MX800, for example, monitors subtle changes in the patient's condition and assists in recognizing the early signs and symptoms of sepsis by comparing the state of the patient to the defined criteria for screening sepsis. This helps you to provide quality care even with the resource constraints of a changing healthcare landscape.

bedside

Much more than a monitor

Connectivity to external devices as well as to your institution's EHR via the IntelliVue Information Center.

Access hospital infrastructure applications such as your clinical information systems.

Neonatal CDS package allows clinicians to monitor and completely document life-threatening events as well as reveal important information about oxygen saturation.

ST Map gives clinicians an integrated view of directional ST movements, allowing for a shorter reaction time than traditional ST indexes, saving crucial minutes.

Smooths workflow

This robust solution combines real-time monitoring views with clinically relevant information from the hospital intranet or applications, and is designed to enhance workflow throughout the hospital.

Takes a broader view

A wide screen, intuitive user interface, and flexible screen options are designed to enhance diagnostic confidence and workflow. A single display with integrated patient monitoring and relevant clinical information means space savings and fewer cables.

Reassuringly familiar

The consistent, easy-to-use IntelliVue interface simplifies clinician training and allows more effective deployment of clinical staff throughout the hospital.

Choose just what you need

Measurement modularity allows you flexibility in patient care. The system is highly configurable and widely scalable.

Easily integrates into existing IT infrastructures

This flexible, fully open clinical workstation connects impartially with other vendors' IT applications, integrating seamlessly with your institution's existing IT infrastructure so that hospital IT retains full control of its network.

wherever you are

View patient information on the wide screen which allows for longer waveforms than traditionally sized screens.

Remote control operation for single-hand use supports wired (USB) communication, as well as alpha-numeric entry.

Quick and easy access to patient information from anywhere in the patient room.
